

2016 August Vaccine Events Family Survey Results

The Immunization Collaboration of Tarrant County (ICTC) began surveying families at their annual vaccine events in 2013. The families who choose to fill out the survey complete it during the 10 minute waiting period after their child receives vaccines. The ICTC uses the survey feedback from the families to provide high quality service and make process improvements at the events from year to year. Below are the 2016 results.

672 surveys were completed for a 15% response rate.

90% of families surveyed agree that vaccines will prevent their child from catching certain diseases.

67% of families surveyed report it would be difficult to receive vaccines for their child if the ICTC events were not offered.

94% of families surveyed report that the registration forms were easy to understand.

97% of families surveyed report that they were treated with kindness and respect at the event.
